FLOW SIDE TABLE Furniture

As the tide shifts and the ocean flows back onto the shoreline, the coastal rock is covered beneath a slick of water. Our Flow tables show that interaction, the fluid and the steadfast juxtaposed. The smooth glass captures the movement of light as it undulates with the waves, visible in ripples crossing the surface of the rock. Available in clear, black, and white, the visual of the surface state changes from day to night. As the seasons progress and temperatures drop, sea glass can form. Our Ice glass table shows the water in a frozen state, an opaque aquamarine, criss-crossed with crack-like lines.

FL-M-1 Flow Side Table is shown above with Ice Glass.
