FLOW

As the tide shifts and the ocean flows back onto the shoreline, the rock is covered beneath a slick of water. Our Flow tables show that interaction, the fluid and the steadfast juxtaposed. The smooth glass captures the movement of light as it undulates with the waves, visible in ripples crossing the surface of the rock. Available in clear, black, and white, the visual of the surface state changes from day to night. As the seasons progress and temperatures drop, sea glass can form. Our ice glass table shows the water in a frozen state, an opaque aquamarine, criss-crossed with cracks.

*Flow Side Table shown above with small seaglass top, 18"H.

Basalt	Small Seaglass	16" X 20" X 14"H	56lb	Glass Type Ripple (Black, White, Clear), Ice	Indoor Clear
		16" X 20" X 18"H	113lb		
	Large Seaglass	19" X 28" X 18"H	123lb		

Basalt	Round Glass	18" Dia. x 14"H	54lb	Glass Type Ripple (Black, White, Clear), Ice	Indoor Clear
		18" Dia. x 18"H	108lb
