

BRENTCOMBER

SWEEP DINING

A sweep is the part of a tree that has corrected itself after some force, such as wind or snow, has altered its vertical growth. This reinforced bend actually makes the tree stronger than before. The sweep base is monolithic, carved from a solid piece of wood. The 10 degree angle in the base reminds us of nature's resilience, strength and perseverance.

All of the Sweep Table bases are milled in douglas fir with other wood species available for tops.

**Shown with base in Douglas-fir with hand brushed soft white finish; top shown is a Douglas-fir slab with hand brushed soft white finish.*
